

## eConnect™ utility for synchronization and network connection

The **eConnect** utility enables a Symbol Technologies terminal to make a connection automatically to a desktop PC, network, or the Internet through an InVision Ethernet cradle and then synchronize data or launch an application. Mobile professionals now have the tool they need to stay connected.

### Advantages

**eConnect** enables businesses to leverage the benefits of low-cost mobile devices:

- Competitive advantage and flexibility
- Ethernet connectivity
- Server-side administration on the enterprise backbone
- Remote upgrades
- Reduced cost of business

### How eConnect Works

The Control Panel applet lets you configure your terminal to accommodate changing environments. When you place the terminal in an InVision Ethernet cradle, **eConnect** automatically identifies the connection and performs the desired activity:

- Synchronize data with a desktop PC using Microsoft® ActiveSync® or other third-party software
- With ActiveSync disabled, establish a RAS connection with a server, then either synchronize data or connect to the Internet
- Establish a network connection and then launch an application

### General Settings

- Enable/disable **eConnect** to manage docking events
- Launch ActiveSync
- Connect to the “Work” or “Internet” connection defined on the terminal
- Launch an application on the terminal

### Minimum Requirements

- Desktop PC with Windows® 98 or above installed and configured to use a local serial or USB synchronization cradle; Internet access
- InVision Ethernet cradle
- Compatible Symbol Technologies mobile device using Microsoft Windows® Pocket PC 2002, Windows CE 4.2 or earlier, or Windows Mobile® 2003
- DHCP server, appropriately configured and operational
