

## iWedge™ scan-to-text capability for Palm OS® applications

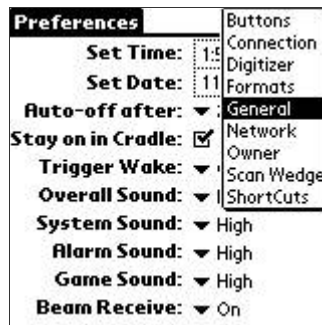

**iWedge** is a keyboard wedge application designed for use with Symbol Technologies Palm Powered™ terminals. **iWedge** allows the user to pass scan data to any field that expects data from the keyboard. Now, any application can enjoy the benefits of bar code data entry.

### Advantages

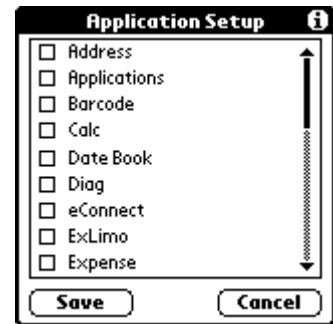

- Using **iWedge** requires no programming
- Use with languages and development tools that do not support scanning (such as Web Clipping and Java)
- Scan to third-party programs that do not otherwise support scanning
- Scan to any single- or multi-line text field
- Configure easily through the Preferences panel
- Optional - Enable and disable programmatically (sample code included)

### Flexible Configuration

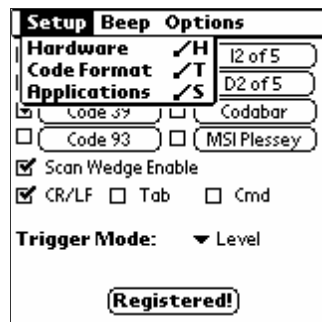

- Keyboard Wedge program
  - Configurator program
- After installation, access the Scan Wedge configuration screen through the terminal's Preferences panel.

Choose the applications that will use the wedge. Applications that open the scanner port do not need **iWedge** to use the scanner and are not listed.

Enable/disable **iWedge**, configure supported bar code symbologies, and configure other terminal settings.

### Minimum Requirements

Symbol Technologies terminal, SPT 1550 or later (Palm OS® v3.5 and up)
